

# Simulation d'écoulement de billes

Projet de Programmation - Soutenance finale

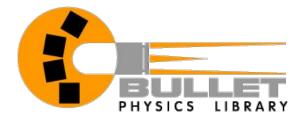

Bibliothèque

- Deux composants :
  - Système de simulation physique
  - Système de gestion de collisions

Qu'est-ce qu'un moteur physique?

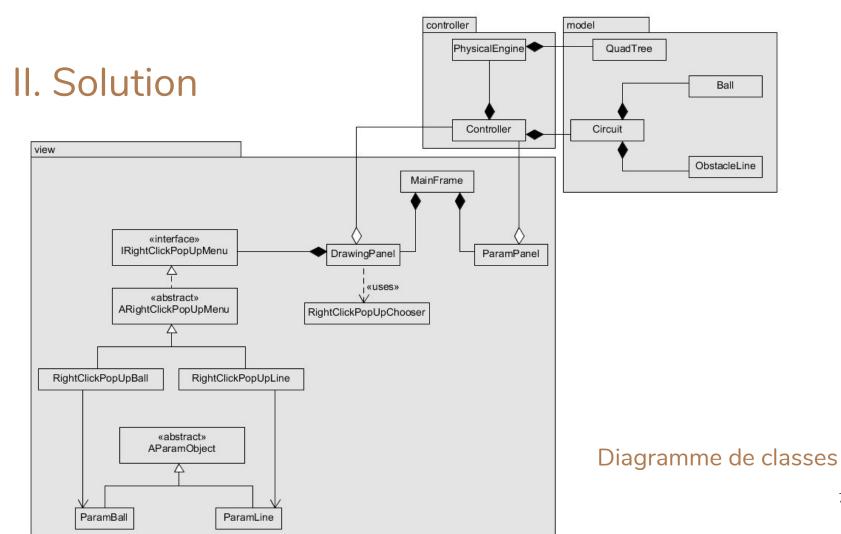

Existant

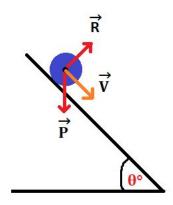

- Moteur physique 2D
  - Déplacement des billes
  - Détection et gestion de collisions des billes
- Interface graphique
  - Paramétrage de la simulation
  - Import et export de données
- Performances et robustesse
  - Temps de chargement court
  - Tests sur le moteur physique

#### Besoins

Pas de temps

Accélération

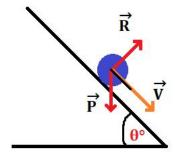

Déplacement d'une bille sur un plan incliné

Moteur physique - Déplacement

Pas de temps

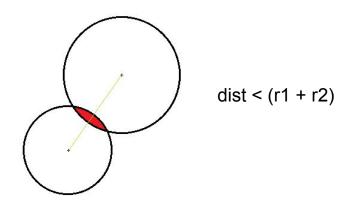

Accélération

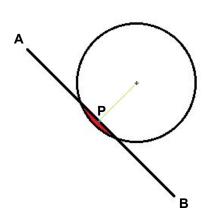

Déplacement d'une bille sur un plan incliné

Moteur physique - Déplacement

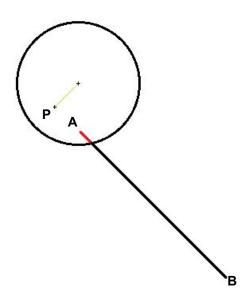

#### Détection d'une collision bille-bille

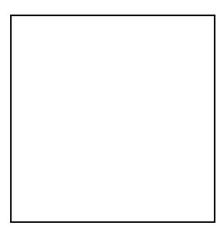

#### Détection d'une collision bille-obstacle

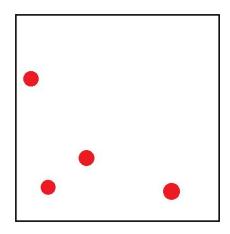

Moteur physique - Collisions

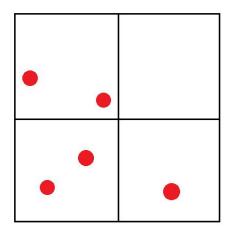

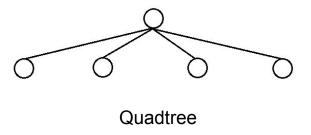

Quadtree

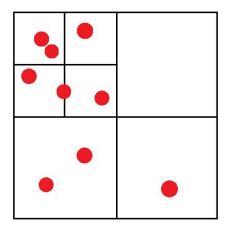

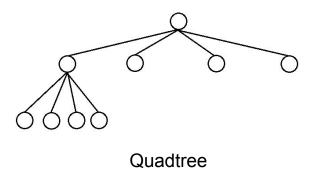

Quadtree

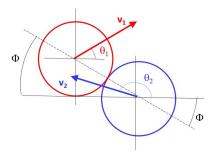

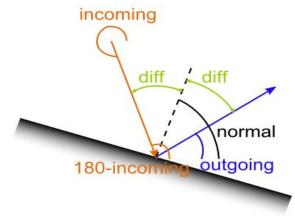

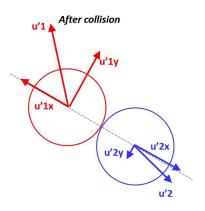

Before collision

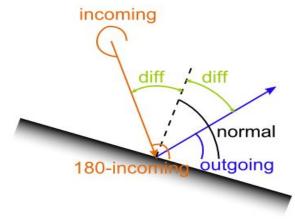

Gestion d'une collision entre deux billes

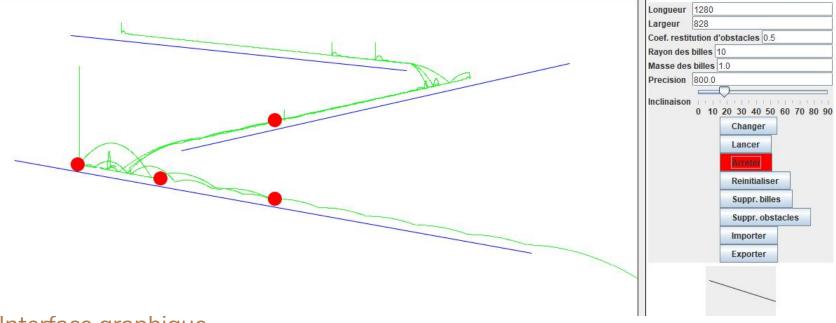

Gestion d'une collision entre bille et obstacle

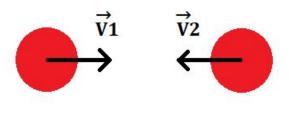

Gestion d'une collision entre deux billes

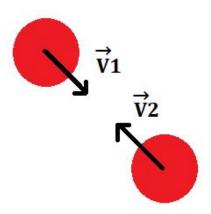

Gestion d'une collision entre bille et obstacle

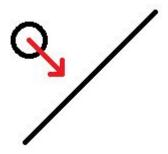

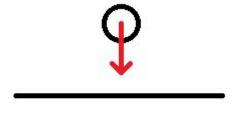

Interface graphique

	✓ ⑥ controller.PhysicalEngine.access\$5()	100ms	0,2%	0ms	0,0%	2
	<ul> <li>controller.PhysicalEngine.resolveCollisionBallObstacle()</li> </ul>	100ms	0,2%	0ms	0,0%	2
	<ul> <li>view.DrawingPanel.paintComponent()</li> </ul>	24737ms	■ 57,1%	0ms	0,0%	252

#### Tests de profil

Main (16) (29 mars 2018 17:23:49)

### IV. Extensions

#### IV. Extensions

• Ajout de frottements

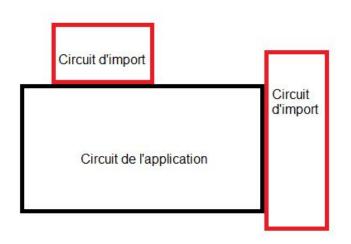

• Pas de temps évolutif

Précision de la simulation

#### IV. Extensions

Comment?

Implications

Fusion de circuits

#### Merci de votre attention!
